

You can protect our network.  
How about our bottom line?

Finally, a sophisticated firewall that doesn't require an IT department to operate. The AdminForce **Powerwall 3** Network Security System was designed to deliver the highest level of security in a turnkey service package not previously available or affordable to smaller companies.

Powerwall 3 goes far beyond simple firewall protection, providing an alarm system with escalated warnings and an "on guard" force of technicians—monitoring your network remotely—who are trained to identify any danger signs that appear in your network.

You'll enjoy a constant view of network security, automated reporting of critical network operations and the peace of mind that comes with knowing your network is monitored 24/7/365 by specialists dedicated to maintaining the protection and privacy of your network.

POWERWALL **3**

**Unbeatable performance. Unbelievable price.**

Comparable firewalls from Cisco and others can cost in excess of \$15,000 and require your personnel to be trained in the operation of their equipment. While this isn't an issue for larger companies with IT personnel, most businesses do not have this luxury. Powerwall 3 is a fraction of the cost and includes remote installation assistance and a full year of monitoring by our expert technicians.

**The power of Linux**

Unlike other operating systems, Linux is seldom affected by viruses, worms and similar network calamities. It's also extremely reliable—as well as inexpensive—and this is why we can offer such exceptional protection for less than half the cost of comparable protection systems.

**Automatic monitoring and upgrades are included.**

Our network monitoring center staff tracks new viruses and reviews newly developed "cracker" techniques on a continual basis. Improvements or fixes are deployed instantaneously and automatically to our customer base. There's no need for your staff to figure out how to combat the newest threats to your network's security—we do it all for you.

**About AdminForce**

AdminForce is dedicated to making the Internet safe for your business communications and e-commerce activities. Unlike other firewall manufacturers, the AdminForce team has an extensive background serving the needs of law enforcement. Combined with the development strength of our engineering staff, AdminForce has created a product that combines new levels of sophisticated protection with a network security system and pricing structure never before available.

**Powerwall 3 Key Benefits**

- Secure Linux-based system provides flexibility and less costly maintenance while delivering outstanding performance
- Remote 24/7/365 monitoring, including automatic upgrades
- Provides weekly probe/attacks reports
- Industry-standard packet filtering techniques block any packet to the network that isn't explicitly allowed
- Includes the full range of proxy services, including DNS, Web, e-mail, CUSeeMe, realaudio and video, and more
- VPN service authorizes access by verifying the identity of users at the firewall and permitting or denying access to any TCP- or UDP-based application
- An adaptive intrusion detection system monitors the network to identify normal traffic patterns and alert based on unusual traffic in a highly customizable fashion

**Powerwall 3 Features:**

- Stateful firewall
- Intrusion detection system
- Weekly reports
- Monitoring service
- Upgrades service
- Transparent proxy services
- IPSEC VPN

**Powerwall Plus Features:**

- E-mail server
- Web-based e-mail
- POP e-mail retrieval
- Anti-spam features
- User-controllable spam settings

**Hardware Configuration Options:**

- Slim Desktop
- Mini Tower
- Rackmount
